1 Logo

No minimum	<i>*Brainz icon</i> Useable at any size
33px / 12mm high min.	<i>*Brainz icon detail</i> Under this size details can get unclear and distracting, particularly for visually impaired*
55px / 20mm high min.	<i>*Brainz logo no text</i> Ideally has generous sizing and space to breathe. If the page/app/context is very busy, consider using a simpler icon instead.

1.1 Logo useage

Cleanspace

An area of clear space must be maintained around all sides to preserve the integrity of the logo. This separation from other elements optimises visibility and recognition.

Clear space on all sides of the logo is one ‘half honeycomb’.

Don'ts

- a. Don't stretch the logo.
- b. Don't alter the logo or add effects such as drop shadows, embossing, etc.
- c. Don't change the logo opacity
- d. Don't use the logo on a busy or colorful background

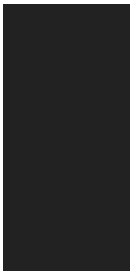

2. Colours

MetaBrainz sub-brands each have their own colour, which is combined with the Metabrainz orange (right).

The PANTONE colour system is a way of matching print inks to a colour as closely as possible. Please use the digital colour for digital applications, the PANTONE swatch only applies to physical print items.

MetaBrainz does not use full black. This includes for web use, for instance all headers and body text should be set to #1e1e1e.

A non-full black is easier to read against a white background, including for most visual impairments.

 	<i>R 235, G 116, B 59 C 4, M 67, Y 87, K 0 #eb743b</i>	<i>PANTONE: 1575 C</i>	 	<i>R 30, G 30, B 30 C 72, M 66, Y 65, K 75 #1e1e1e</i>	<i>PANTONE: Neutral Black C</i>
 	<i>R 186, G 71, B 143 C 27, M 86, Y 9, K 0 #ba478f</i>	<i>PANTONE: 674 C</i>	 	<i>#800080 #ffa500 (web: purple)</i>	

2.1 Colour useage

Colours are to be used sparingly.

If a sub-brands colour is purple, it doesn't mean headers should be purple - usually you should use the MB black.

Let the logo on the page stand out.

Gradients are to be used sparingly.

Gradients are appropriate for backgrounds on landing pages and minimal items that are high up in the hierarchy (level of importance on the page).

It should not be used for elements that contain data/information, beyond a header. It should be used sparingly on data-centric pages, if at all.

When in doubt, leave it out.

Do

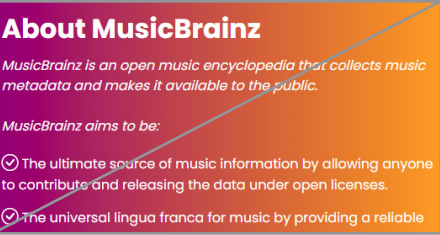

Don't

Do (maybe)

Don't

3. Typefaces

3.1 Typeface styles

The MetaBrainz logo family uses the the Roboto Type face.
It is also our preferred display font (e.g. for headers) across
print and web.

For content* use Sintony, across print and web.
*body, field, table and menu text.

Header 1 (h1)

*Roboto
Bold / 700
48pt*

Only for the boldest of
display purposes.
Suitable for a home page,
potentially on a gradient.

Header 2 (h2)

*Roboto
Bold / 700
32pt*

Suitable for a page or panel
title.
Use very sparingly.

Header 3 (h3)

*Roboto
Regular / 400
26pt*

Suitable for titles.
When dividing page content up
into distinct sections, use h3.

Text colour is always #1e1e1e

Title	<i>Sintony</i> <i>Bold / 700</i> <i>17pt / 18 pt*</i>	For titles within the content/content sections.
Paragraph ^(p)	<i>Sintony</i> <i>Regular / 400</i> <i>14pt / 15 pt*</i>	Our standard content font.
Small print	<i>Sintony</i> <i>Regular / 700</i> <i>12pt / 13 pt*</i>	Use sparingly. Potentially in sub-text grey (#808080)

**mobile*

<u>Link</u>	<i>Paragraph</i> <i>+ underline</i>	
Rollover	<i>Paragraph</i> <i>+ highlight</i>	Highlight in the primary project colour, adjusted to be lighter if necessary
Sub-text	<i>#808080</i>	For visually unimportant text you can use this lighter grey. Use sparingly.

Button

Roboto
Medium / 500
14pt / 15 pt

Bold: Strongest emphasis.
Use rarely. Competes with headers on the page. If you are using bold more than once in a sentence consider bulletpoints instead.
Italic: Strong emphasis
Use to emphasize words (for instance, don’t), and when you are referencing a title/name or an object. For instance, an album title, or the name of a button when giving instructions.
Bold & Italic: Don’t.
All caps: Don’t (usually).

4. Design Guidance

<p>Think about the layout in terms of ‘hierarchy’. (Hierarchy: the order of importance of elements)</p> <p>Add emphasis (good location, style, colour, imagery, etc) to elements at the top of the hierarchy.</p> <p>De-emphasize elements at the bottom of the hierarchy.</p>	<p>Less is more</p> <p>When using design elements - colours, space, graphics - consider how it helps users understand and use data.</p> <p>Functionality first, then enhance with visual tools.</p>
<p>Less clicks = better</p> <p>MetaBrainz users spend millions of hours entering data- this means that one more click to perform a common task can have a massive time cost.</p> <p>Make a users path clear, then get them there quick.</p>	<p>Mobile-first? Not always</p> <p>Assess the audience for a page/site.</p> <p>The nature of some MetaBrainz data-entry orientated projects means that users may primarily use a desktop.</p> <p>The ultimate aim is to provide every user with a good experience, regardless of their device.</p>

5. Accessibility

<p>We aim to be accessible for all users.</p> <p>Use your judgement based on the situation, and make your best effort to apply these guidelines.</p> <p>Images should always have alt-text, and critical content/information be included as text.</p> <p>Alternate Text describes an image for people using screen readers, or who cannot display images for another reason.</p> <p>Images should accompany, not replace, important text, otherwise consider repeating the information as text.</p>	<p>Font/text size</p> <p>No smaller than 12-14pt (1-1.2em / 16-19px)</p> <p>‘Small print’ can be reduced down to 9pt</p>
<p>Contrast</p>	<p>Use sufficient contrast levels between background and text.</p> <p>Use a contrast checker to assess this: https://webaim.org/resources/contrastchecker/</p> <p>Your type/background combination should achieve a ratio of 4+ on the checker.</p>
<p>Contrast 2</p>	<p>Extreme contrast is also to be avoided.</p> <p>This is why we use #1e1e1e instead of full black, on pure white.</p>

14 MusicBrainz | Brand Guidelines

Important links required on every page type, i.e. search and editor profile links, grouped logically.

b. Title Bar

Give the user a sense of where they currently are in the site.
Keep short and uncluttered.

Extended entity information, grouped into pages.

Main content or the Side bar.

'Core' entity information.

Consider making elements collapsible.

An extension of the title bar, further identifying information for the entity, with more details.

Related information and key user tools.

Links into the wider MetaBrainz ecosystem, such as development, documentation, community, MetaBrainz, and other projects.
